

Gingerbread Man Experiment

Today Acorn Class carried out an experiment to find out which liquid would make a gingerbread biscuit break first.

We used three different liquids: warm water, milk, and cold water. We carefully placed a gingerbread biscuit into each beaker and watched what happened.

We observed that the gingerbread biscuit in the warm water broke first. The biscuit in the milk and the cold water took longer to break.

At the end of our experiment, we enjoyed sharing a gingerbread biscuit together!
