

This half term, our Science lessons are all about

ELECTRICITY

We've learned about different sources of energy and how our use of them is beginning to change as we try to protect our environment.

We also learned about some of the different appliances we use in our everyday lives and how they get the energy (in the form of electricity) they need to work. We sorted them into three groups on a Venn diagram to show if they were mains-powered, battery powered or could work with power from either. Look below to see what we found out.
