

METAMORPHOSIS MAYHEM

For British Science Week, Year 2 explored the life cycle and metamorphosis of a pond frog through a fun interactive game. The game involved all players starting as frogspawn and playing a game of 'rock paper scissors' with another player. The winner grew into the next stage i.e. frogspawn became tadpole. Players could only play 'rock paper scissors' with someone who is at the same stage as them. We enjoyed creating a corresponding action for each stage of a frog's metamorphosis.

We had so much fun playing this game that we created a similar version by looking at the metamorphosis of a butterfly!
