

Hello, this is Lola Heart, astronaut for MAA (Mars Achieved Agency). Today is Martian day 4 and as you've probably guessed already...I'm alive! This will come as a huge surprise to my crew who thought I'd become a space crumpet when a horrendous storm threatened to destroy our space craft. Elfie

I'm guessing, when I was blown away from the crew, my communications antenna split, harming my bio monitor and lodging itself in my chest. Since the very beginning, I've been locating the communications transmitter from the Space Rover 13 to attempt to make contact with AFSPC. Overwhelmed. Anxious. Scared. Will I ever see grass again? Mason F

Even if you get this, it would take months to find me. As this module is only designed to last 56 days, will it disintegrate? Hopeful. Calm. Positive. I am a courageous engineer. I can science this. If I get water, I can live longer. If I can ration the food, I can live. If I get sleep, I can have energy.

Georgie

Listen Commander. It's not your fault. Don't feel guilty. Don't be too hard on yourself. Should I even bother? If I get scared will it even make a difference? Would I change anything? No. It's who I am. I'm a human. Exploring different planets and achieving what others never dreamt of.

Teddy.

We've invented engines, we've landed on the Moon and now we are exploring Mars.

Frankie

Mars: a new world to investigate. The heavens encouraged a new generation of explorers and I am proud to be one of the first.

Thomas

In fact, everywhere I go now, I'm the first. The first to walk on Mars, the first to collect samples and the first to see the two moon, Phobos and Deimos. Yes, I could run out of water and die of thirst. Yes, I could run out of oxygen and slowly die. Although, if I remain positive I can use my skills and stay alive. Parker

The landing on the moon inspired me and my generation to dream. I'm here on Mars. Alive. If I can survive here...alone...on Mars, then you better start believing. Start believing big.

Amelie
