

Geography- Volcanoes

As part of our geography work on 'Extreme Earth', we have worked together in groups to create our own volcanoes! We firstly created the model volcano using newspaper and a glue/water mixture. We had to wait a while for this to dry before we could paint them! Once dry, we made our volcanoes erupt! Firstly, we put a bicarbonate of soda, washing up liquid and water mixture into the tube inside the volcano. We then mixed vinegar with red food colouring. Once these steps were complete, we added the vinegar mixture to the tube and BOOM! The 'lava' flowed out of our volcanoes. We had so much fun doing this- it really brought volcanoes to life for us!
