

## Homework – Due in on Wednesday 17<sup>th</sup> December

Please complete your own 'Space' project.

Use the next two weeks to find out something about space that we haven't covered in class. Here are some ideas to help you (these are only ideas – you can choose to do something else as long as it is space themed).

- Find out about space travel through history.
- Research about the first 'man on the moon'.
- Create a spinning solar system model.
- Research any of the other planets in our solar system.
- Tim Peake was the first British man to go into space – find out about his time on the International Space Station.

You can complete work in your book, on your computer, on a different piece of paper or as a piece of art/3D model – the choice is yours!
