

Erupting Volcanoes!

To celebrate the end of our ***Tremors*** topic and for working really hard during our test week at school, Team 3 have made our own erupting volcanoes! First, we decorated our volcanoes with paint. We spoke about the difference between rock types and identified that volcanoes are made of igneous rock.

Next, we used bicarbonate of soda, water, and red food colouring to mimic the magma building pressure underground. When we added the vinegar the pressure became too much and our volcanoes erupted!
